LVC
COMMERCIAL AND RESIDENTIAL TECHNOLOGY SOLUTIONS

Low Voltage Consulting

We install the technology in buildings, support the people who use it and build software for the work they do.

Building Technology / IT Support / Software & AI

South Hero, Vermont

Locally based, with projects across Vermont.

Our Story

It Started With the Wiring

LVC began as a Vermont low-voltage contractor, installing cabling and networks.

Customers who knew us from the jobsite began calling about their phones, computers and business systems. Those relationships shaped the company LVC is today.

Michael McNeil, LVC's owner, brings hands-on field experience and a background in software engineering.

Building Technology

We plan and install cabling, Wi-Fi, cameras and audiovisual systems around the way people use a space.

LVC installations in the field

At Handover

For commercial copper cabling, LVC can test individual links and deliver certification reports the owner or IT team can use.

Explore Building Technology

IT Support

People need a working computer, access to their accounts and a phone that reaches the right person.

LVC helps with users, devices, networks and business phones. We agree with your team on what support covers and how to get help.

Explore IT Support

A New Employee's First Morning

Workstation

Connect the computer to the network.

Account access

Check sign-in and the tools the job requires.

Business phone

Place a call and confirm where it rings.

Software & AI

We implement Odoo, connect existing tools and build software for the steps people still handle by hand.

One Example

Inquiry

A website form captures the customer’s request.

Customer Record

The request goes into the system the team uses.

Follow-Up

A named person can see who to contact and why.

When AI drafts a reply or extracts details from a document, we build in a step for someone to check the result.

Industries We Serve

Construction & Trades	Low-voltage installation, network cabling and certification for project handover.
Hospitality	Guest Wi-Fi, staff phones and audio and video in shared spaces.
Field Service	Tools that connect the office, technicians, job materials and scheduling.
Manufacturing & Distribution	Floor networks, scanning and software that follows stock from receipt to dispatch.
Offices & Workplaces	User support, business phones, network moves and meeting rooms.

At Home We also plan home networks, cameras, media rooms and whole-home audio.

Project Example

Opening a New Office

A move brings the building, the people and the business systems into the same plan.

Before the Walls Close

Choose cable routes, Wi-Fi coverage and meeting-room connections while the work is accessible.

Before People Move In

Set up workstations, accounts and phones. Test them from the desks where staff will use them.

Before the Doors Open

Call the main number and send a test inquiry. Check who receives each and how staff follow up.
